

Mayank Bhati

Software Engineer | Backend and Distributed Systems | Java

Noida, India | +91 8445047809 | bhati.mayank842@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Backend engineer with nearly 4 years of experience at Adobe and Samsung building and operating large-scale distributed systems. Improved performance, consistency, and fault recovery for services supporting 6.5M+ users. Core experience in Java, asynchronous processing, concurrency, caching, and production reliability.

WORK EXPERIENCE

Adobe

Jun 2024 - May 2026

Member of Technical Staff 2 (Backend Engineer)

- Owned components of a distributed roster-reconciliation platform serving 6.5M+ K-12 users at 99.9%+ uptime; synchronized Adobe groups and education profiles with Clever and ClassLink through queue-driven workflows and Redis-backed state.
- Cut worst-case sync time for a 120k+ user district from ~12.5 hours to ~1 hour 50 minutes (~85%) through profiling, bounded parallel fetch/write batches, Aurora read replicas, and JVM/GC tuning, without increasing infrastructure spend.
- Designed heartbeat-based recovery with atomic claims to recover interrupted syncs after pod crashes; fixed cache drift through event-driven invalidation on upstream identity changes.
- Replaced per-user ClassLink API fetches with bulk section aggregation and Redis-backed user builders, reducing downstream calls by ~99.99% and eliminating peak-season HTTP 429 throttling.
- Improved production resilience with circuit breakers, retries, and bounded, compressed error payloads to prevent scheduler out-of-memory failures; monitored services with Splunk/Grafana, resolved 150+ Critical/Blocker issues, and used JUnit 5 and Spring integration testing.

Samsung

Jul 2022 - Jun 2024

Software Development Engineer (Full-Stack)

- Delivered catalogue and checkout features for samsung.com/in across Java/Spring Boot services and React UI; supported millions of daily requests at 99.9%+ uptime and ~10x peak order volumes.
- Handled flash-sale surges with Kafka-based load leveling and bounded thread pools; strengthened checkout with idempotency keys, retry-safe API contracts, and circuit breakers.
- Reduced REST API latency by 15-25% through query-plan analysis, composite indexes, N+1 elimination, and targeted Redis caching; led SIT/UAT bug-fixing cycles.

EDUCATION

National Institute of Technology, Uttarakhand | 2018 - 2022

Bachelor's degree, Electrical & Electronics Engineering | CGPA: 7.99/10

TECHNICAL SKILLS

Backend and languages	Java 17/21, SQL, Spring Boot, Spring MVC, Spring Security, JPA/Hibernate
Distributed systems	Data structures and algorithms, Kafka, concurrency, idempotency, backpressure, caching
Data and cloud	PostgreSQL/Aurora, Redis, AWS, Docker, Kubernetes, CI/CD, Git
Testing and operations	JUnit 5, Mockito, TDD, Resilience4j, Spring Retry, Splunk, Grafana, on-call
AI-assisted engineering	Claude, GitHub Copilot, Cursor; daily agent-assisted development at Adobe
AI fundamentals	LLM concepts and retrieval-augmented generation (RAG) — currently learning
Frontend (familiar)	JavaScript, React, Next.js, HTML, CSS

PROJECTS

Zorovah | School Management SaaS | Founder and Backend Developer

- Built a Spring Boot/PostgreSQL backend with tenant isolation and role-based access; deployed on AWS ECS and integrated Gemini for teacher-reviewed student reports.

CareerCompass | Career Guidance Platform | Founder and Developer | [Live](#)

- Built a static Next.js career-guidance app with deterministic RIASEC and cosine-similarity scoring; deployed through GitHub Actions CI/CD with no backend storage of assessment data.
